

FOR IMMEDIATE RELEASE

## **VoltServer Brings Safe, Sustainable Power to Permanent Supportive Housing at Kate's Rest Foundation**

*Prince Edward County, ON (March 25, 2025)* — Kate's Rest Foundation, a pioneer in providing permanent supportive housing, has partnered with VoltServer to provide safe, sustainable power to homes for individuals transitioning out of homelessness. This collaboration leverages VoltServer's Digital Electricity™ technology to create energy-efficient housing that fosters long-term stability, independence, and a sense of belonging.

For nearly two decades, Kate's Rest Foundation, located in Prince Edward County, Ontario, has been a beacon of hope, offering not just shelter but a genuine path forward for those facing homelessness. At Kate's Rest, everyone deserves not just a place to live but the opportunity to rebuild their lives with dignity, purpose, and community.

Understanding that housing alone is not enough, the foundation has developed a four-year, holistic program aimed at empowering residents with essential life skills:

- **Health & Wellness:** Access to addiction counseling, nutrition education, and self-care practices.
- **Home Management:** Hands-on training in property maintenance and home repairs.
- **Community Living:** Building collaboration and responsibility in shared spaces.
- **Sustainable Agriculture:** Learning to operate a hydroponic farm for self-sufficiency.

Upon completing the program, residents graduate to their own highly efficient, modern living spaces powered by VoltServer's Digital Electricity™. This innovative technology not only lowers energy costs and improves efficiency but also enhances safety, ensuring that each resident has a secure foundation for a brighter future.

"VoltServer's technology is a game-changer for our housing projects and hydroponic farms. The energy savings will be reinvested into training and educational opportunities, allowing us to extend our reach and support even more individuals," shared Brian Hart, founder of Kate's Rest Foundation.

Kate's Rest Foundation is grateful for VoltServer's support in this mission, helping to power not just homes but hope and opportunity. This partnership embodies the belief that a stronger, more compassionate society is built when everyone has access to safe, sustainable living conditions.

"This partnership reflects our commitment to innovative solutions that create lasting change, ensuring more individuals have the opportunity for a stable, independent future," stated Steve Eaves, VoltServer CEO.

To further this initiative, Kate's Rest Foundation will also host training sessions for local electricians and builders, introducing them to the potential of Digital Electricity™ to revolutionize modern power distribution.

## **About Kate's Rest Foundation**

Since 2006, Kate's Rest Foundation has provided permanent supportive housing for those facing homelessness. Our mission extends beyond housing, focusing on education and training that empower residents to build healthier, self-sufficient lives. We believe that supportive communities, not just housing, are the key to ending homelessness. For more information, visit [www.katesrestfoundation.ca](http://www.katesrestfoundation.ca).

## **About VoltServer**

As global energy needs grow and change, VoltServer addresses power distribution challenges through its patented Digital Electricity™ solutions. From state-of-the-art venues to sustainable housing, VoltServer delivers efficient, safe, and reliable power distribution that sets a new standard for resilience.
